1. **Write a program to make another list of duplicate elements from the following list**
   [1, 5, 6, 5, 1, 2, 3]

   Answer:

```
original_list = [1, 5, 6, 5, 1, 2, 3]
duplicate_list = []

for i in original_list:
    if original_list.count(i) > 1:  # If the value is present more than 1 time then it is a duplicate value
        if i not in duplicate_list:
            duplicate_list.append(i)
print(duplicate_list)
```
